 - 1929-TRP: Evaluation of building life cycle analysis tools incorporating embodied carbon – final work statement approved by RAC last June, TRP went out to bid this past fall. 16 bids received (significantly more than other TRPs that went out to bid). PES evaluated bids earlier this month and has made a recommendation to TC 2.8 that was approved electronically. That recommendation next goes to the RAC, which will then make the final decision and then ASHRAE will negotiate final contract with bidder. Make sure Kevin B. is on track for handing off to RAC (Chris Gray).
 - We are cosponsoring two work statements with other TCs: 1947-WS Climate change driven extreme temperature effects map for efficiency and resilience map of heat pump technology (TC 2.5 Global Climate Change) and 1885-WS Guideline/Book for Design Installation and Operation of PV (TC 6.7 Solar and Other Renewable Energy). The former will be considered for approval by the RAC this week; the status of the other is uncertain at this point; Janice has reached out to the author and we hope to voting on this one in the near future.
 - We have one active RTAR (1933-RTAR: Water-Energy Nexus: Utility Source Water and Source Energy Dataset, which we are hoping Jim and/or Rafi will turn into a WS this year.
 - We have a number of “pending topics”, and are always looking for new ones. If you have an idea for a research topic, please reach out to me. And I note that people and institutions are permitted to bid on topics that they originate, as long as they’re not involved in the selection process either via the PES or as a voting member of the TC.
